

Draw Angles

Grade 4

Name: _____

Draw each angle using two rays from a single point.

An **angle** is formed by two rays that share the same starting point (called the **vertex**). The space between the rays is the angle.

Example: **Acute:** less than 90° | **Right:** exactly 90° | **Obtuse:** between 90° and 180° | **Straight:** exactly 180°

(1) Draw an acute angle of approximately 35° .

(2) Draw a right angle.

(3) Draw an obtuse angle of approximately 115° .

(4) Draw a straight angle.

(5) Draw an acute angle of approximately 70° .

(6) Draw an obtuse angle of approximately 160° .
